Profile rails DIN35

DIN rail DIN35, universal carrier made of a sheet metal profile in electrical engineering for fastening electrical equipment in distribution boxes, control cabinets, junction boxes, etc. Different components (e.g. relays, impulse switches, timers, circuit breakers, terminal blocks) can be slid onto a carrier rail from the side or plugged in and locked from the front. This standardized method facilitates the assembly of control cabinets and switch boxes, thus reducing labor costs. The different types of rails are in the standard EN 60715.
